

HARSH SOLANKI

MECHATRONICS ENGINEER

CONTACT

- 8755688171
- harshthakur6647@gmail.com
- Kasganj, UP
- <https://www.linkedin.com/in/harsh-solanki-7751a6285/>

EDUCATION

**Chandigarh University,
Mohali**

Bachelor of Engineering
(B.E) – Mechatronics
Engineering
August 2023 – Present

LANGUAGES

Hindi, English

SOFT SKILLS

- Confident
- Fast learner & Adaptable
- Critical thinking

Award

- 3rd position in Tekathon 3.0. 2024
- 2nd position in Tekathon 4.0 2025

HOBBIES

- Cricket
- Chess
- Sudoku

PROFESSIONAL OVERVIEW

Drives Mechatronics Engineering under graduate with practical experience in automation, sensors and microcontrollers-based projects. Equipped with a solid understanding of multidisciplinary engineering concepts and a dedication to producing outstanding outcomes in changing settings.

❖ Technical Skills

- Pneumatics and sensor integration (Inductive, Proximity, Infrared, Pressure, Solenoid)
- CAD Design (Fusion 360, AutoCAD, Solidworks)
- Decent knowledge of IC engines and Electric drives and Axial flux motors
- Python, ROS2

❖ PROJECT EXPERIENCE RPR Robot (Pick and Place) Individual / Aug 2025 – Nov 2025

- Designed and developed an Arduino-based Pick and Place Robot capable of accurately picking and placing objects at predefined locations using motor control and sensor feedback.
- Integrated motors, sensors, and mechanical gripper mechanisms to achieve precise positioning, smooth motion, and reliable object handling.

❖ Conveyor System for Sorting using Camera calibration Team Project / Jan 2025 – April 2025

- Designed and developed a conveyor-based sorting system using camera calibration and image processing to accurately detect, identify, and sort objects based on visual features.
- Implemented real-time camera calibration and control logic to synchronize object detection with conveyor movement, ensuring precise sorting and improved system efficiency.

❖ Tesla Coil – Wireless Power Transmission Prototype Team Project | Oct 2024 – Dec 2024

- Built a miniature Tesla Coil to demonstrate the principle of electromagnetic induction and wireless energy transfer. Successfully lit fluorescent bulbs wirelessly using high frequency alternating current.

❖ SOCIAL INTERNSHIP June 2024 – July 2024

- Conducted field visits to nearby villages to study the social economic conditions of rural communities.
- Interacted with local vendors and small-scale workers to understand daily livelihood challenges, especially related to heat, dust, and lack of infrastructure.
